PROCESSING SIDE-STREAMS FROM AQUACULTURE

- Typical side-streams in fish farming
 - Mortalities
 - Sludge (faeces and remains of fish feed)
- Challenges
 - Avoid spreading contamination within and between fish farms
 - Side-streams are not biologically stable products – need to be sanitised
 - High cost of transport and sanitation
- Solutions for making a sustainable growth in aquaculture business
 - Treat side-streams as potentially valuable new raw materials
 - Finding best ways to sanitise mortalities for compliance with EU regulations
 - Valorisation of sludge as an organic fertilizer product

Fish Sludge Circular Economy
